RIYA SHIVANAND KAPADNIS

Boston, MA | kapadnis.ri@northeastern.edu | LinkedIn | Portfolio

Data analyst with 2+ years turning sales, supply chain, and customer data into insights using SQL, Python, Excel, Power BI, and Tableau

EDUCATION

Northeastern University, Boston, MA | Master's in Information Systems *Expected Dec 2026*

Coursework: Data Management and Database Design, Data Science, Applied Statistics, Big Data, Agile, Business Process Engineering

Savitribai Phule Pune University, Pune, India | B.E. in Information Technology *June 2023*

TECHNICAL SKILLS

- **SQL and Databases:** SQL (CTEs, window functions, complex joins, data cleaning and validation), Snowflake, BigQuery, PostgreSQL, SQL Server, MySQL, Teradata, multi-source data reconciliation
- **Python and Statistics:** Python (Pandas, NumPy, Scikit-learn, Statsmodels, Matplotlib, Plotly), R, regression, clustering, Bayesian analysis, hypothesis testing, EDA, data profiling
- **BI and Advanced Excel:** Power BI (DAX), Tableau, Looker, Streamlit, Excel (Power Query, XLOOKUP, INDEX/MATCH, Pivot Tables, Slicers), KPI dashboards, self-serve and executive reporting
- **Data Tools and Cloud:** Airflow, Talend, ETL/ELT, GCP (BigQuery, Cloud Storage, Cloud Run), AWS (Redshift, S3, EC2), Azure, Docker, GitHub Actions, DVC
- **AI and Automation:** Azure OpenAI, Google Gemini, LangChain, RAG, prompt engineering, Claude Code, AI-assisted analytics
- **Business and Communication:** customer segmentation, sales and category analysis (pricing, distribution, assortment, promotion), data quality audits, requirements gathering, data storytelling, stakeholder management

WORK EXPERIENCE

AI Engineer, Co-op | TwinAI Inc., Boston, MA *Jan 2026 - June 2026*

- Built GenBI, a self-serve AI analytics platform where users upload a CSV or Excel file and get automated data profiling, AI-generated charts, and KPI insights without writing SQL
- Designed GenBI's chart-picker logic to choose from 14 chart types across 6 families based on each column profile; connected Google Gemini for Key Influencers analysis that explains what drives each KPI
- Analyzed product feature adoption and output quality metrics in Python; presented evidence-based recommendations to technical and non-technical stakeholders at each sprint review
- Gathered requirements from product and engineering stakeholders and documented acceptance criteria; automated data quality audits in Python with clear quality thresholds to reduce rework
- Shipped GenBI from prototype to a deployed product with a Flask and PostgreSQL backend, dual Azure authentication, and Stripe billing

Data Analyst | AgriGain Alliance, Nashik, India *Aug 2023 - Aug 2024*

- Examined supply chain, sales, and ERP data in SQL and Python, surfacing pricing and distribution trends that helped cut costs 17% and grow sales 20%
- Created Power BI dashboards for senior leadership and non-technical teams, and regularly presented data-driven recommendations to stakeholders
- Standardized team data preparation workflows and documented data definitions and quality standards, improving reporting reliability by 25%
- Ran exploratory data analysis in PostgreSQL and Python to find process inefficiencies, cutting decision cycles by 12%

Data Analyst Intern | Swastish Enterprises, Pune, India *April 2022 - Aug 2022*

- Queried a Teradata data warehouse with SQL to extract and prepare business data for recurring stakeholder reporting
- Developed Tableau dashboards tracking key business KPIs and automated data quality checks in Python, cutting manual effort by 30%
- Investigated data anomalies with root-cause analysis in Python and SQL, tracing issues back to their source systems
- Partnered with business stakeholders to turn their reporting needs into SQL queries and dashboard views

PROJECTS

Supermarket Algorithmic Marketing Application (Python, Snowflake, SQL, Scikit-learn, Power BI), Boston *Nov 2023 - Jan 2024*

- Processed 10M+ retail transactions in Snowflake with SQL and Python; applied Scikit-learn clustering to segment customers by purchasing behavior and find high-value cohorts and promotion response patterns
- Tracked cohort KPIs such as purchase frequency, basket size, and category penetration in Power BI to drive assortment and promotion ideas
- Forecast inventory needs with predictive models, improving product availability by 12%

United States Health Insurance Program (BigQuery, Looker, Power BI, Talend, GCP), Boston *Oct 2023 - Nov 2023*

- Reconciled 12M+ health insurance records in BigQuery across multi-source government data, documenting quality rules and source-to-target mappings
- Delivered Looker and Power BI dashboards for Medical Loss Ratio and Claim Settlement Cycle; improved reporting efficiency 35% with reusable, parameterized dashboards for self-serve analytics
- Transformed multi-source data with Talend ETL and wrote metric definitions, lineage documentation, and quality thresholds for reproducible workflows

Global Trade and Tariff Analysis (Python, R, PyMC, Statsmodels, Power BI), Boston *Jan 2025 - April 2025*

- Modeled 1M+ trade records (2012 to 2022) with regression and Bayesian methods in Python and R, reaching an R-squared of 0.82
- Validated model assumptions and produced Power BI dashboards and executive reports with planning recommendations for non-technical audiences

Project LANTERN - SEC Filing Document Intelligence (Python, Airflow, GCP, DVC, GitHub Actions), Boston *Sept 2025 - Dec 2025*

- Evaluated parsing quality and designed data quality controls for Airflow ELT pipelines on GCP that process thousands of SEC 10-K/10-Q filings, with DVC versioning and GitHub Actions CI/CD
- Compared parser output formats and integrated Azure AI Document Intelligence to guide the choice of parsing tool

Goodreads Data Pipeline (Python, Airflow, AWS Redshift, Tableau), Boston *Aug 2024 - Sept 2024*

- Collected reader engagement data from the Goodreads APIs into AWS Redshift with daily Airflow ETL workflows
- Visualized top genres, reader activity trends, and engagement metrics in Tableau
